Sales & Profitability Dashboard

Power BI Dashboard Overview — Sales View & Profit View

Built by Rashad Alaa

Project Overview

This document covers the Overview page of the Global Superstore Power BI dashboard, built on a star-schema data warehouse in SQL Server. The page provides a single toggleable view of Sales and Profit performance across category, segment, market, and shipping mode, filterable by year, region, segment, sub-category, and category.

The dashboard is intentionally simple by design — the focus of this project was on visual clarity and interactivity rather than exhaustive analysis. The Customer Behavior page is out of scope for this document.

Key Performance Indicators

KPI	Value	YoY %
Total Sales	\$12.63M	26.18%
Total Profit	\$1.47M	24.12%
Total Orders	25K	26.88%
Profit Margin %	11.64%	-1.63%
AOV	505.16	-0.55%

Sales, profit, and order volume all grew strongly year over year, while profit margin and AOV both declined slightly — suggesting growth was driven more by volume than by per-order value or efficiency.

Sales View

Overview — Sales View

Sales Trend

- Sales ranged from a low of \$0.54M in January to a high of \$1.58M in December, with a mid-year dip to \$0.75M in July before recovering into a strong Q4.

Sales by Category

- Technology leads with \$4.7M, followed by Furniture (\$4.1M) and Office Supplies (\$3.8M) — a fairly even split across the three categories.

Sales by Segment

- Consumer is the dominant segment at 51.48% of sales, ahead of Corporate (30.25%) and Home Office (18.27%).

Sales by Market

- APAC is the top market (\$3.6M), followed by EU (\$2.9M), US (\$2.3M), and LATAM (\$2.2M). EMEA and Africa trail evenly at \$0.8M each, with Canada negligible at \$0.1M.

Sales by Ship Mode

- Standard Class dominates shipping at \$7.6M — more than triple Second Class (\$2.6M), with First Class (\$1.8M) and Same Day (\$0.7M) far behind.

Profit View

Overview — Profit View

Profit Trend

- Profit is more volatile than sales month to month, dipping to \$71K–\$78K in February, April, and July, then climbing through Q3–Q4 to a peak of \$176K in November before easing slightly to \$170K in December.

Profit by Category

- Technology generates the most profit (\$0.66M), ahead of Office Supplies (\$0.52M) and Furniture (\$0.29M) — the same ranking as sales, but with a wider relative gap.

Profit by Segment

- Consumer again leads at 50.96% of profit, closely mirroring its share of sales, followed by Corporate (30.08%) and Home Office (18.95%).

Profit by Market

- APAC contributes the most profit, followed by EU, US, and LATAM. Unlike in Sales (where EMEA and Africa tied), Africa outperforms EMEA in profit, with Canada lowest.

Profit by Ship Mode

- Standard Class again leads by a wide margin at \$890.24K, versus \$294.76K (Second Class), \$208.18K (First Class), and \$76.23K (Same Day) — profit concentration by ship mode is even steeper than for sales.

Notes

- Sales and profit follow a broadly similar distribution across category, segment, market, and ship mode — no major misalignment between where revenue is generated and where it converts to profit.
- The main watch item is the slight YoY decline in Profit Margin % and AOV despite strong top-line growth, worth revisiting once the discount/pricing analysis layer is added to this project.
